Perlite loosens soil and helps with aeration.
Available in 8QT, 1cuft, 4cuft.

GREENTREE COCO™
A sustainable alternative to peat, coco holds moisture without waterlogging.

GREENTREE SEED STARTER™
A fine mesh of biodegradable coconut coir, sphagnum peat, and vermiculite that's ideal for starting seeds.

This growing medium is designed specifically for seed starting, so the coarse hydrophobic coconut coir mesh provides just the right environment for germination, and its aeration control charge will help get your seedlings off to a great start.

Made by hand and backed by science.™
Made by GreenTree in Ithaca, NY.
Read more about the science behind the soil, plus full product descriptions, tips and more at www.greentreeusa.com. 0.5 cu ft.

GreenTree Seed Starter is a growing media that is completely soil free!
Available in 0.5 cuft.

GREENTREE COCO™
A sustainable alternative to peat, coco holds moisture without waterlogging.

GREENTREE NAKED BLOCK™
GreenTree's compressed coconut coir is an excellent soil amendment or standalone growing media. After expanding, add to your potting mix or garden soil to improve its texture and ability to hold water.

Directions: Soak the block with 20 gallons of water for 24 hours. One block expands to approximately 2.5 cubic feet once hydrated. Allow the block to stand for approximately 20 hours to get maximum expansion. It's ready to use when it's wet through and breaks apart. GreenTree Naked Block™ has a pH of 5.5-6.0 and an EC of less than 0.5.

Made by hand and backed by science.™
Developed by GreenTree in Ithaca, NY.
Read more about the science behind the soil, plus full product descriptions, tips and more at www.greentreeusa.com. ORGANIC expands to 2.5 cu ft.
